

## Ecoliteracy: For A Sustainable World! - 2023

Climate change is an existential threat to our world. The European Green Deal emphasizes the key role of education and training in the green transition.

We aim to improve the environmental literacy skills of students and teachers and to implement environmentally friendly practices in our school.

We will make behavioral changes in students' individual preferences.

We will ensure the active use of recycling bins in our school and adapt the environmentally friendly practices in our partner organization to our own school reality.

Practices such as consuming less and separating waste correctly will be a part of the school culture and will be monitored regularly.

We will boost the digital skills and creativity of our students with tasks such as designing posters and preparing exhibitions.

**ECOLITERACY: FOR A SUSTAINABLE WORLD**

The infographic includes the following elements:

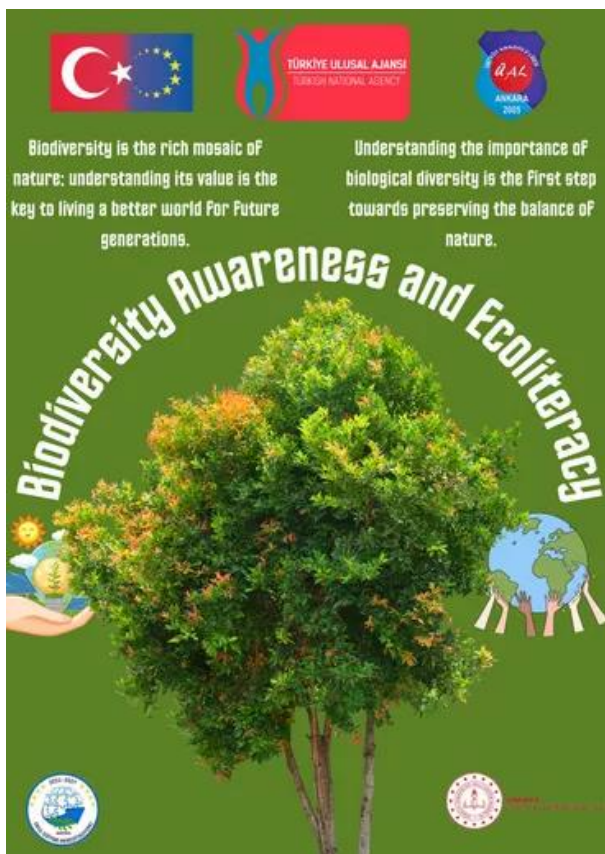

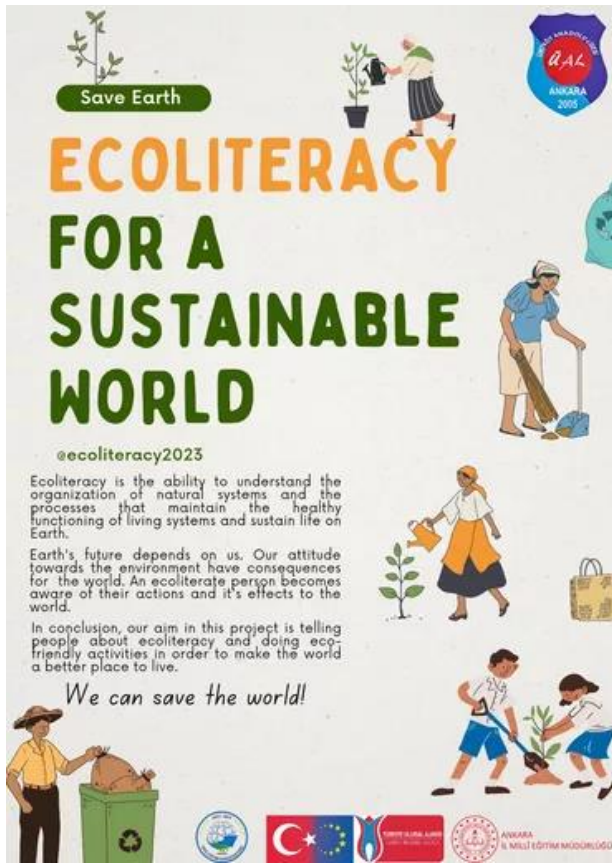

- Logo of Üsküdar Anadolu Lisesi (UAL) Ankara 2005.
- A photograph of hands holding small green plants.
- A recycling symbol with a globe in the center.
- A circular icon of a tree with a globe as its base.
- A central diagram showing 'Ecological literacy' at the center, connected to five surrounding boxes: 'Ecological knowledge literacy', 'Ecological behavioral literacy', 'Ecological emotional literacy', 'Ecological attitudinal literacy', and 'Ecological cognitive literacy'.
- A cluster of green leaves.
- A definition: **Ecoliteracy is about developing a knowledge that humans are connected to everything else on the planet – animals, insects, plants, and rocks. Everything.**
- The #ERASMUS DAYS logo for 9-14 October 2023.
